

SafeHer

Help in one action.

Private • On-device • Always ready

Team name: Ninja Builders

Team id-01AB4F4049D6

College: Netaji Subash University of Technology

A privacy-first personal safety app for women

The Problem

In moments of danger, every second counts —but reaching for a phone, unlocking it, opening an app, and finding the right contact takes time most people in crisis don't have.

1 in 3

women worldwide experience
physical or sexual violence

in their lifetime (WHO)

< 5 sec

is often all the time
available to act in an
emergency

100%

on-device first —
no data leaves your

phone unless you choose

*Speed and privacy
are the design priority*

One Action. Immediate Help.

SafeHer is built around a single trusted gesture — a press, shake, or voice cue — that instantly activates a coordinated safety response, without unlocking or navigating menus.

Press the panic button

Shake your phone

Say a safe word

HOLD TO ALERT

What Happens in That Instant

1

Alerts trusted contacts

Pre-selected people get an instant SMS/notification with your status.

2

Shares live location

Real-time GPS tracking is sent and updates continuously until cancelled.

3

Records audio evidence

Discreet background audio recording starts, stored securely on-device.

4

Stays discreet

Screen can show a normal app —no visible indication an alert was sent.

Privacy Is the Foundation, Not a Feature

On-device by default

Sensitive data —location, audio, contacts —stays on your phone unless an alert is triggered.

No background tracking

SafeHer doesn't monitor or log your movements outside of an active alert.

Biometric lock

App access and settings are protected by fingerprint or face ID.

Works with limited signal

Alerts queue and send the moment connectivity is available.

TECHNOLOGY

Frontend

- Flutter(Android & IOS)

Backend

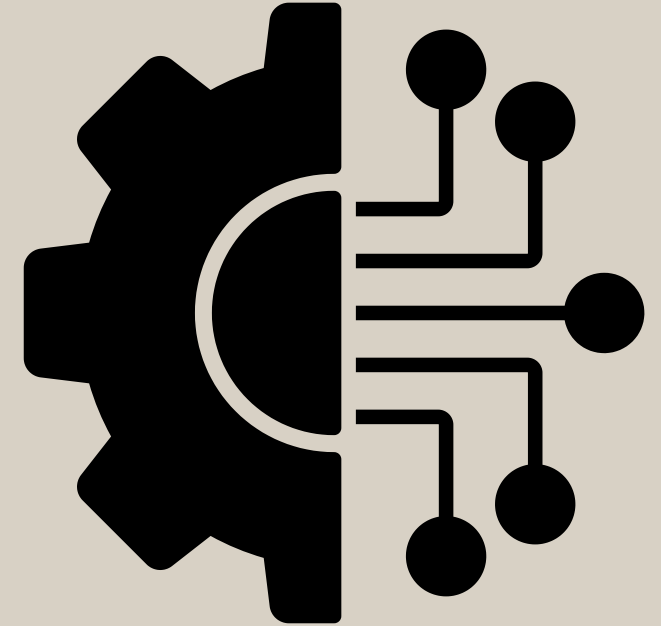

- Firebase(Firestore, Authentication, Cloud Function)

Core Features

- Google Google Maps SDK + Geolocator
- Firebase Cloud Messaging (FCM)
- Speech- To-Text
- Sensors Plus(Shake Detection)
- Flutter Sound(Audio Recording)

Security

- Biometric Authentication
- Secure Local Storage(Hive/SQLite)

Demo + Conclusion
